

# Send Your Outpatient and Community Health Referrals Electronically

## ELECTRONIC REFERRAL

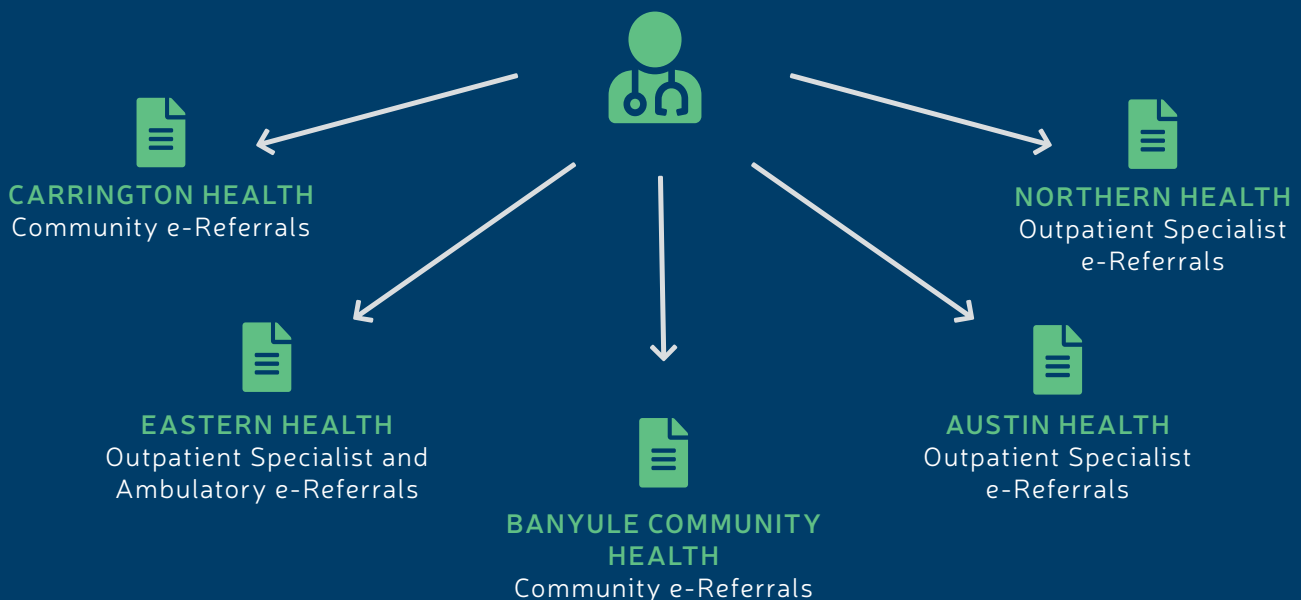

An e-referral is an electronic document that can be sent electronically from one healthcare service to another, as opposed to the current process of faxing or posting the referral.

## NO COST INVOLVED

Save time and cut consumable costs by sending your outpatient and community health referrals electronically using either Best Practice, Medical Director or Genie.

This is available at no cost to the general practitioners or general practices, HealthLink SmartForms, is available in versions of Medical Director 3.17 and above, Best Practice Premier (LAVA and INDIGO) and Genie 8.8 and above.

## HEALTHLINK SMARTFORMS

HealthLink SmartForms e-referral solution is integrated within Medical Director, Best Practice & Genie and will streamline the completion and submissions of electronic referrals. From your software programs, GPs will be able to select a form, have it pre-populated automatically with data from the electronic patient record, and sent securely to the intended recipient, and receive an acknowledgement of receipt without the need to print and fax. A copy of the form will automatically be stored securely in the patient's record.

**If you would like an e-REFERRAL demonstration please contact:**
