

15 August 2017

Sterilisation

For Practice nurses and Staff

Sterilisation is a process that begins with prior cleaning of reusable medical devices and equipment and continues through to cycle monitoring and storage ready for use. In this session we will cover the principles of sterilisation based on the RACGP guidelines.

Event Overview

Presented by: Suzanne Gibson
GP Engagement Officer, Eastern Melbourne PHN

Learning outcomes

- Define the principles of sterilisation and be able to describe the sterilisation process undertaken in the practice
- Differentiate between standard and transmission based precautions and their application in the sterilisation process
- Recognise the importance of validation and calibration of sterilisation procedures and process to ensure effectiveness of the sterilisation
