

My Health Record enablement and quality improvement

For general practitioners and practice staff

Good data quality is a powerful resource for general practice that can be used to drive activities leading to improved clinical care and health outcomes. This training opportunity will provide participants strategies for implementing sustainable processes to improve data quality at their general practice.

Facilitated by

Katrina OttoPrincipal & Owner of Train IT Medical

Katrina is one of Australia's most experienced digital health and medical software trainers. She will be facilitating an interactive data quality session to assist participants in developing a planned approach to practice data improvements.

Participants will be provided with practical steps and case studies to develop a data quality improvement plan addressing a priority area specific to their general practice needs.

This workshop will incorporate a presentation, case studies, scenario-based training, individual and group activities to consolidate learnings.

Learning outcomes

Participants will be provided practical strategies on how to:

- develop an understanding of changes to My Health Record and third party tools available to patients and clinicians for improved sharing of quality clinical data
- use software as a tool for practice improvements and data analytics
- identify ways to ensure compliance with standards for essential demographic and clinical data entry
- design a systematic approach to data quality improvements.
