

Monash Health's Maternity GP Liaison is pleased to invite GPs, Midwives and Obstetricians to an update on:

HAEMATOLOGY IN PREGNANCY

- Which blood group antibodies should I worry about?
- Does my patient need an iron infusion?
- Are the platelets too low for an epidural?
- When should I screen for thrombophilia?

KEY NOTE SPEAKER: DR PETER NEIL

Specialist Obstetrician & Gynaecologist,
Director of Women's Health Specialty Training Program,
Monash Health

LEARNING OBJECTIVES:

- Outline the investigation and management of anaemia in pregnancy.
- Identify the blood group antibodies of significance in pregnancy.
- Counsel couples regarding appropriate thalassaemia screening.
- Recognise when to refer thrombocytopenia for specialist review in pregnancy.
