

27 July 2019

Keeping the wounded walking

For GPs

This Active Learning Module will update general practitioners with the latest evidence and practical expertise in the management of diabetic foot disease, lower limb venous disease and lower limb arterial disease, including symptoms, preventative/early disease interventions, ulcer management and advanced interventions following the patient journey from the community into hospital and beyond.

Delivered by:

Northern Health Specialists:

- vascular medicine surgery
- podiatry and foot procedure unit
- infectious disease
- chronic wound service
- haematology.

Learning outcomes:

- enhance the knowledge of GPs in the early diagnosis, treatment and management of diabetic foot disease, venous ulcers and infection in the primary care setting
- undertake a comprehensive assessment and identify patients at risk of peripheral arterial disease and diabetic foot disease
- list and explain available best practice treatments, including lifestyle changes, to improve patient outcomes
- identify the criteria for immediate referral of patients with critical limb ischemia to a hospital emergency department
- identify tertiary care pathways and strategies that exist to benefit patients with chronic venous ulcers, peripheral arterial disease or diabetic foot disease.
