

GP Electronic Referrals

Monash Health and Monash Children's Specialist Consulting Clinics can now receive electronic referrals.

Update: 18th January 2021

Since launching GP electronic referrals at the end of September 2020, Monash Health and Monash Children's Hospital have seen a significant uptake from General Practitioners across the catchment, recently reaching a milestone of **5000 total eReferrals**.

Over **200 GP practices** now actively use the system to securely send their referrals directly from their clinical software and their experience has been overwhelmingly positive.

As we continue to refine and improve the system, we welcome any feedback you might have and would value your involvement and expertise in ongoing development.

Maternity eReferral Form

The Maternity Team in conjunction with Obstetricians, midwives, GPs and Share Care Committee have recently launched a **specialised Maternity eReferral form**.

The form will assist in guiding GPs through important information that is required by the hospital to accept and accurately triage pregnant patients.

It has been built to seamlessly integrate with the Obstetrics module within your clinical software to self populate information such as: **Gravida, Parity, Estimated due date & LNMP**

Find out more information

If your practice has the following clinical software installed, you can send electronic referrals **now**.

Medical Director – version 3.16 and above

Best Practice – version 9x and above (Indigo)

Genie – version 8.8 and above

Medtech – version 10.4

Please refer to the **Monash Health eReferral Website** for further information on how to make a referral.
