

HOW CAN POLAR ASSIST YOUR PRACTICE?

POLAR

POLAR stands for Population Level Analysis & Reporting (POLAR GP) system. POLAR is a business intelligence tool that uses extracted data from your clinical and billing software program and can be used by practice staff and GPs. Practices can use POLAR for quality improvement, support business development and help provide better patient centered care.

No cost involved

There is no cost to practices within the EMPHN catchment. An agreement to provide de-identified practice data to the PHN is required for the use of the tool. EMPHN is then able to identify system gaps and work towards developing better services for the community.

POLAR can help you meet accreditation

POLAR assists practices to meet RACGP 5th Standards for General Practice: *Indicator QI 1.3B Our practice uses relevant patient and practice data to improve clinical practice.*

Now web based

POLAR is now web based and the installation is very quick and can be managed via Teamviewer into the practice at a time that suits.

PIP QI

General practices wanting to participate in the Australian Government's Practice Incentive Program (PIP) Quality Improvement (QI) can use POLAR as their data extraction tool to submit de-identified data through EMPHN to the Department of Health. For more information see our website www.emphn.org.au/PIPQI

If you would like a POLAR demonstration please contact:
