EASTERN MELBOURNE
An Australian Government Initiative

While all patients are eligible to register for MyMedicare from 1/10/23 some practices may choose to prioritise patients that are in higher risk groups. This Walkthrough will identify patients that are most at risk of being hospitalised: *Note it will identify patients who have been 3 or more times in the previous 2 years but it will not identify if these are face to face consultations you will need to check your billing software to confirm.*

Identify patients at high risk of hospitalisation Using the Hospitalisation Avoidance Tool Report In ᴾᴼᴸᴬᴿ
Open POLAR and select:

Hospital
Avoidance Tool
Beta Release Report

-Select RACGP Active to select patients that have been to your practice 3 or more times in the last 2 years.	POLAR RACGP Active CURRENTLY SELECTED ☑
- On the left-hand side select both the Urgent Risk and High Risk Box	RACGP Active CURRENTLY SELECTED ☑ Select a Practice Location ▼ Urgent Risk **17** ⓘ High Risk **122** ⓘ
-Go to Patient List (top right) Export to excel these patients are your most at risk.	☒ Export to Excel Patient List PATIENT LIST
