# Visits By Provider

Summary Page
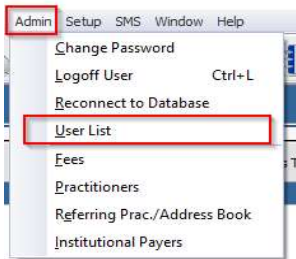

VISITS BY PROVIDER

Software: Medical Director \ Pracsoft

Version: 3.16b (3.16.16.10323)

Visits By Provider is a count of the number of visits per provider. When a visit is entered into Pracsoft, the "Seen By" field determines which provider saw the patient.

The ID selected is saved to the [SERVDOCTOR] column on the [VISITS] table. To retrieve the Providers name, this column is then joined to the [USER_NAME] column on the [CM_RESOURCE] table. If the ID from the [SERVDOCTOR] column cannot find a match in the [USER_NAME] column, no name will be returned and the visit count will not display. It is important that the User ID in Pracsoft matches the User Name in Medical Director.

Software: Best Practice \ Best Practice Admin

Version: Summit 2014 Build 1.8.4.642

To be advised.
