POLAR Summary & Summary Business

Release 3.5.0.1

New Features

- 'Cervical Screening eligibility' filter that identifies patients that have been flagged as not requiring any future pap smear tests. This filter links to the check boxes in the Clinical Information Systems that exclude a patient from future Pap Smear prompts and Recalls.
- New mapping for Diagnosis and Immunisations have been included in the reports.

Bug Fixes

- Fixed issue relating to patients with a diabetes diagnoses appearing as suspected diabetes on the Diabetes Quality Improvement sheet. This issue was caused by a diabetes diagnosis being recorded with an invalid date.
- Issue identified with how the Medical Director (MD) clinical software records patients with a My Health Record (MHR). Patients in MD may be recorded across multiple months and therefore totals for MHR counts do not represent unique patients. Information has been added to relevant visualisations via the **i** information button. This issue will be resolved in a future POLAR release.

Page Changes, New Pages and Usability Enhancements

- **Page Changes**
  - Information Sheet changed to Training and Support. Replaced the interactive graph and links to training videos with additional report user information.
  - Added 'Script Repeats' and 'Script Date' fields to the information table located on the Medications sheet.
  - Separated the Address field on the patient list into Address, Suburb and Post Code columns.
  - Changed name of PAP Smear Test sheet to Cervical Screening
  - Changed the Diabetes Patients table on the Diabetes Quality Improvement (BETA) sheet to only show patients that have an active diagnosis or diabetes related medication.
  - Changed the My Health Record (MHR) sheet to remove counts for Individual Health Identifiers (IHI) and have included a table to show Shared Health Summary (SHS) activity for patients. The sheet also contains a chart to show which patients have had a MHR activated.
  - Added a flag field on the patient list to show which patients have a My Health Record activated.
- **New Pages**
  - **Referrals (Beta):** This sheet allows a practice to track referrals sent out by the practice. The sheet will show the category of referral e.g. Dietitian, Psychology etc. and as well as the clinician responsible for sending the referral.
- **Usability**
  - Increased size of the tree map chart on the Diabetes Cycle of Care sheet to make it easier for selection.
